Hello Geo-list

We are very involved in lidar for Idaho here at Idaho State University's GIS TReC. Today, I would like to let you know about some exciting lidar events happening right now.

The GIS TReC@ISU continues to host both raw (las) and processed Lidar data, delivering all these data as quickly as possible using Globus Online large file transfer. This is a collaboration with the ILC (<https://www.idaholidar.org/>) and you can access our Idaho Lidar Web Viewer by visiting the [ILC](#) or the [GIS TReC website](#) or jump to the web map directly at <https://arcg.is/1fayH8>

We just recently added two collections; one from the Boise River Flood Control District and another from the Idaho National Laboratory (thank you to both those organizations for sharing these data with us). These data are available for download and available as part of our lidar web image service that will stream these data right into ArcGIS. Visit our website for the link!

In addition, through the support of FEMA I am able to offer a **FREE Working with LiDAR in ArcGIS Pro** workshop on Friday August 7th. This workshop will be available for both limited in-person registration as well as webinar-based registrations. Visit <http://giscenter.isu.edu/Workshops/index.htm> for full details and/or to register. Seats will fill on a first-come, first-served basis.

Have a good rest of your week!

Sincerely,

Keith T. Weber
