Hello Geo-list,

I trust many of you are enjoying the Intermountain GIS Users' Conference right now and I hope you will find some time to read this email update about lidar.

We recently completed downloading data for the Southern Idaho 2018 project area #19. This project spans a large area in eastern Idaho and contains well over 4,000 LAZ tiles. To make this manageable for end users we are subsetting it into eight separate pieces and we will provide a good reference map to help you identify the correct data to download for your needs. Project area #19 covers parts of the Beaverhead, Lemhi, and Lost River ranges/valleys as well as Sheep Mountain and Antelope Flat just west of Palisades reservoir.

I hope to have all these data uploaded to our servers in the next few weeks.

I am also happy to report we received the final deliverables on an external hard drive for the Southern Idaho 2018 project and are reviewing these data to ensure all available/new data are copied to our servers as soon as possible.

As always, let me know if you have any questions.

Sincerely,

Keith T. Weber
