Hello

Things are happening in the world of Lidar! First, we have a new project area that has been added to our servers and services, that is the Northcentral 2025 project area #4 which includes western parts of Idaho County as well as some areas in Oregon.

We are nearing completion of our digital surface model work and resulting image service we have created a video showcasing the capabilities of a digital surface model (FYI, to make this video we used our digital surface model image service draped with the NAIP 2023 imagery, and rendered the short video using ArcGIS Pro's animation tools). Here is a link: <https://youtu.be/BztbmUd7QMQ?feature=shared>

We are expecting additional lidar data from the North Central and Idaho Gaps projects to be delivered in the next few months.

Sincerely,

Keith T. Weber, GISP
