Hello,

I am happy to report that the IDFG Sterling WMA lidar is now available for download through our Idaho Lidar Web Viewer <https://giscenter.isu.edu/styler/?appid=163bf5887aa04f308a15fe8e44963bf8>

For those of you who use the Idaho Lidar image service to stream lidar bare earth data directly into your GIS software you might like to test a new raster function I built into our service earlier this week. The new Meters to Feet raster function template will immediately change the default (source) pixel units from meters to feet and all subsequent work or analysis you do with it can be done in feet until you switch back to the original data template. You can access the Idaho lidar image service by connecting to https://giscenter.rdc.isu.edu/server/rest/services/Lidar/Lidar_Idaho/ImageServer

We also enabled WMS for this service as well.

Sincerely,

Keith T. Weber
