Hello

The state of Idaho still does not have 100% lidar coverage but there are active collection projects that will remedy this. These are called the Idaho Gaps projects and some areas are being collected while others are already in review by USGS. I hope we will see new lidar data arriving before the end of 2025.

Our DSM project for Idaho's existing lidar is coming along very nicely. Since the last Idaho Lidar News, we have completed nine project areas and posted these to our server. We are currently working on two large project areas in western Idaho, namely Owyhee and Payette Basin.

If you have questions about Idaho's lidar data please let me know. Have a good day!

Sincerely,

Keith T. Weber, GISPISU GIS Director | Director of the GIS Training and Research Center ([GIS TReC](#))
