Hello

We continue to work on hosting and serving Idaho's lidar data and services. It is quite nice to see how close we are now to complete 100% lidar coverage for our state. In fact, because we recently received all of the USGS North Central 2025 project area data, we are only missing the Southern Gaps data. Once that has been completed the state will be completely covered.

If you are interested to take a look at our current coverage, click the link below:

<https://giscenter.isu.edu/files/IdahoLidarCoverage20251015.jpg>

These lidar data are available for download using our Globus service, as well as our Instant DTM download site (providing bare earth and pit filled bare earth data) as well as both our DTM and DSM web services.

Have a good rest of your day!

Sincerely,

Keith T. Weber, GISP
