Hello

We are getting closer to 100% lidar coverage for the state of Idaho. We just received another North Central 2025 project area that we are actively downloading from USGS and will be adding this to our servers in the next week or two. It is an extremely large project area with nearly 8000 tiles, so your patience is greatly appreciated.

In addition, we have updated both our bare earth (DTM) and digital surface model (DSM) image services in the past few weeks. These services allow you to do most spatial analysis tasks without downloading giant lidar data. If you are unsure how to access these services please let me know and I am happy to assist you.

Thanks for reading.

Sincerely,

Keith T. Weber, GISPISU GIS Director | Director of the GIS Training and Research Center ([GIS TReC](#))
