Hello

We have a new Lidar project area that has been completed in Idaho and is now available on our servers. This is the Umatilla Wallowa Whitman NF area which covers a chunk of Idaho County. See the Idaho Lidar Web Viewer to access these data <https://isu.maps.arcgis.com/apps/instant/media/index.html?appid=796225ca9c9f4c07a1288225ed1afd30>

I would like your input on a possible future lidar workshop focussing on using LAS Tools for lidar processing. If you would like to see this workshop offered in the future let me know.

Last, we are beginning a new part of our lidar project and that is developing a highest hit/top of canopy layer and making these data readily available as an image service. This is a fairly large task that we started this month and will hopefully be completed early in 2025.

Have a good rest of your week.

*Sincerely,*

### Keith T. Weber
