Space Administration

2018 Fall | Idaho – Pocatello

# IDAHO WATER RESOURCES II

Evaluating Evapotranspiration and Water Budget  
Components in Semi-Arid Sagebrush Steppe

Ian Lauer

Carl Jurkowski

Carolyn Macek

Frank Zurek

# Background

- ▶ 60% of Idaho is publicly managed land

# Background

- ▶ 60% of Idaho is publicly managed land
- ▶ Receives an average of 12 inches of precipitation per year

# Background

- ▶ 60% of Idaho is publicly managed land
- ▶ Receives an average of 12 inches of precipitation per year
- ▶ Landcover ranges from semi-arid sagebrush Steppe at low elevations transitions to mixed forest at higher elevations

# Community Concerns

- ▶ The water balance is critical to managing semi-arid environments:
  - ▶ fire susceptibility
  - ▶ native plant management
  - ▶ wildlife range management
  - ▶ grazing allotments

**Agricultural  
Research  
Service**

# Community Concerns

- ▶ The water balance is critical to managing semi-arid environments:
  - ▶ fire susceptibility
  - ▶ native plant management
  - ▶ wildlife range management
  - ▶ grazing allotments
- ▶ Our partners currently use field-based methods to collect ET data.
  - ▶ costly and time intensive
  - ▶ limited distribution for regional scales

**Agricultural  
Research  
Service**

# The Water Cycle

- ▶ There are various inputs to the water cycle such as precipitation.

Image Credit: Jenny Parks Illustration/SSCZO

# The Water Cycle

Image Credit: Jenny Parks Illustration/SSCZO

- ▶ There are various inputs to the water cycle such as precipitation.
- ▶ The previous term focused on water storage as soil moisture.

# The Water Cycle

- ▶ There are various inputs to the water cycle such as precipitation.
- ▶ The previous term focused on water storage as soil moisture.
- ▶ This term focused on evapotranspiration (ET).
  - ▶ Transfer of water vapor from surfaces to the atmosphere
  - ▶ Evaporation + Transpiration

# Objectives

## ▶ ASSESS

- ▶ the potential of multiple models to map ET across semi-arid environments

# Objectives

## ▶ ASSESS

- ▶ the potential of multiple models to map ET across semi-arid environments

# Objectives

## ▶ ASSESS

- ▶ the potential of multiple models to map ET across semi-arid environments

# Objectives

## ▶ ASSESS

- ▶ the potential of multiple models to map ET across semi-arid environments

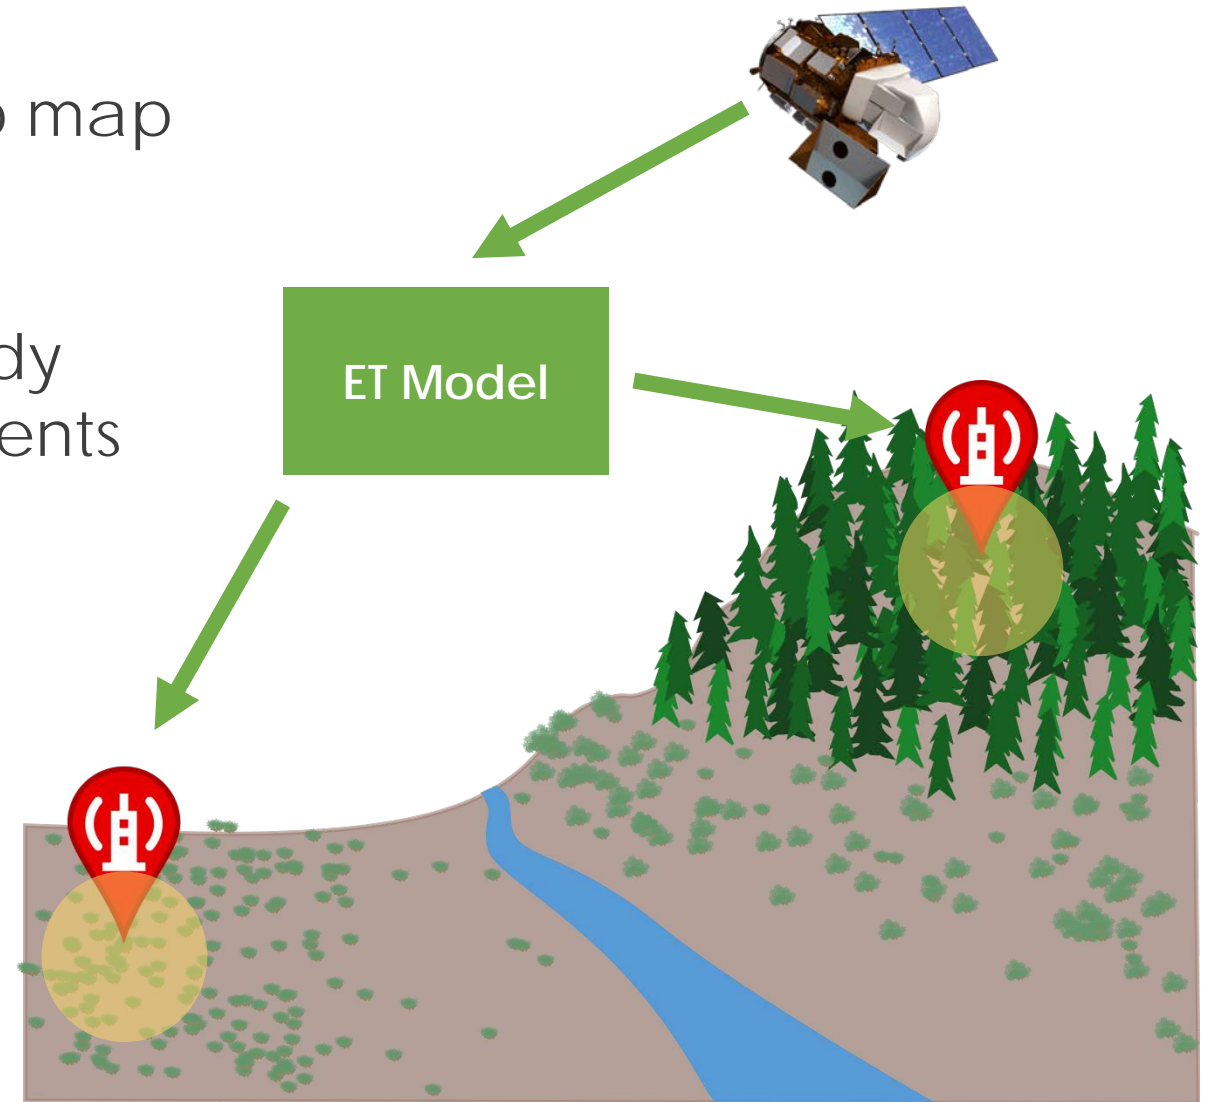

# Objectives

## ▶ ASSESS

- ▶ the potential of multiple models to map ET across semi-arid environments

## ▶ VALIDATE

- ▶ models by comparing them to Eddy Covariance Flux Tower Measurements

# Objectives

## ▶ ASSESS

- ▶ the potential of multiple models to map ET across semi-arid environments

## ▶ VALIDATE

- ▶ models by comparing them to Eddy Covariance Flux Tower Measurements

## ▶ COMPARE

- ▶ ET data to soil moisture, vegetation health, & precipitation to produce a holistic view of water availability

# Objectives

## ▶ ASSESS

- ▶ the potential of multiple models to map ET across semi-arid environments

## ▶ VALIDATE

- ▶ models by comparing them to Eddy Covariance Flux Tower Measurements

## ▶ COMPARE

- ▶ ET data to soil moisture, vegetation health, & precipitation to produce a holistic view of water availability

## ▶ SHARE

- ▶ A model or methodology that can be used by project partners in their respective disciplines

# Methodology

DATA INPUTS

ANALYZE

COMPARE

OUTPUT

**GEE ET Models:**  
EEFlux  
MOD16  
SSEBop

RCEW ET & soil  
moisture,  
MSAVI2

**Other Models:**  
NLDAS-2-Noah

**Google Earth Engine:**  
Combine GEE and *in situ* data;  
extract values at RCEW sites

**ArcGIS Pro:**  
Clip to study area; extract  
values at RCEW Points

Compare ET  
maps to  
elevation, soil  
moisture, etc.

ET Maps &  
Correlation  
Plots

# NASA Satellites Used

Terra  
MODIS & ASTER

Aqua MODIS

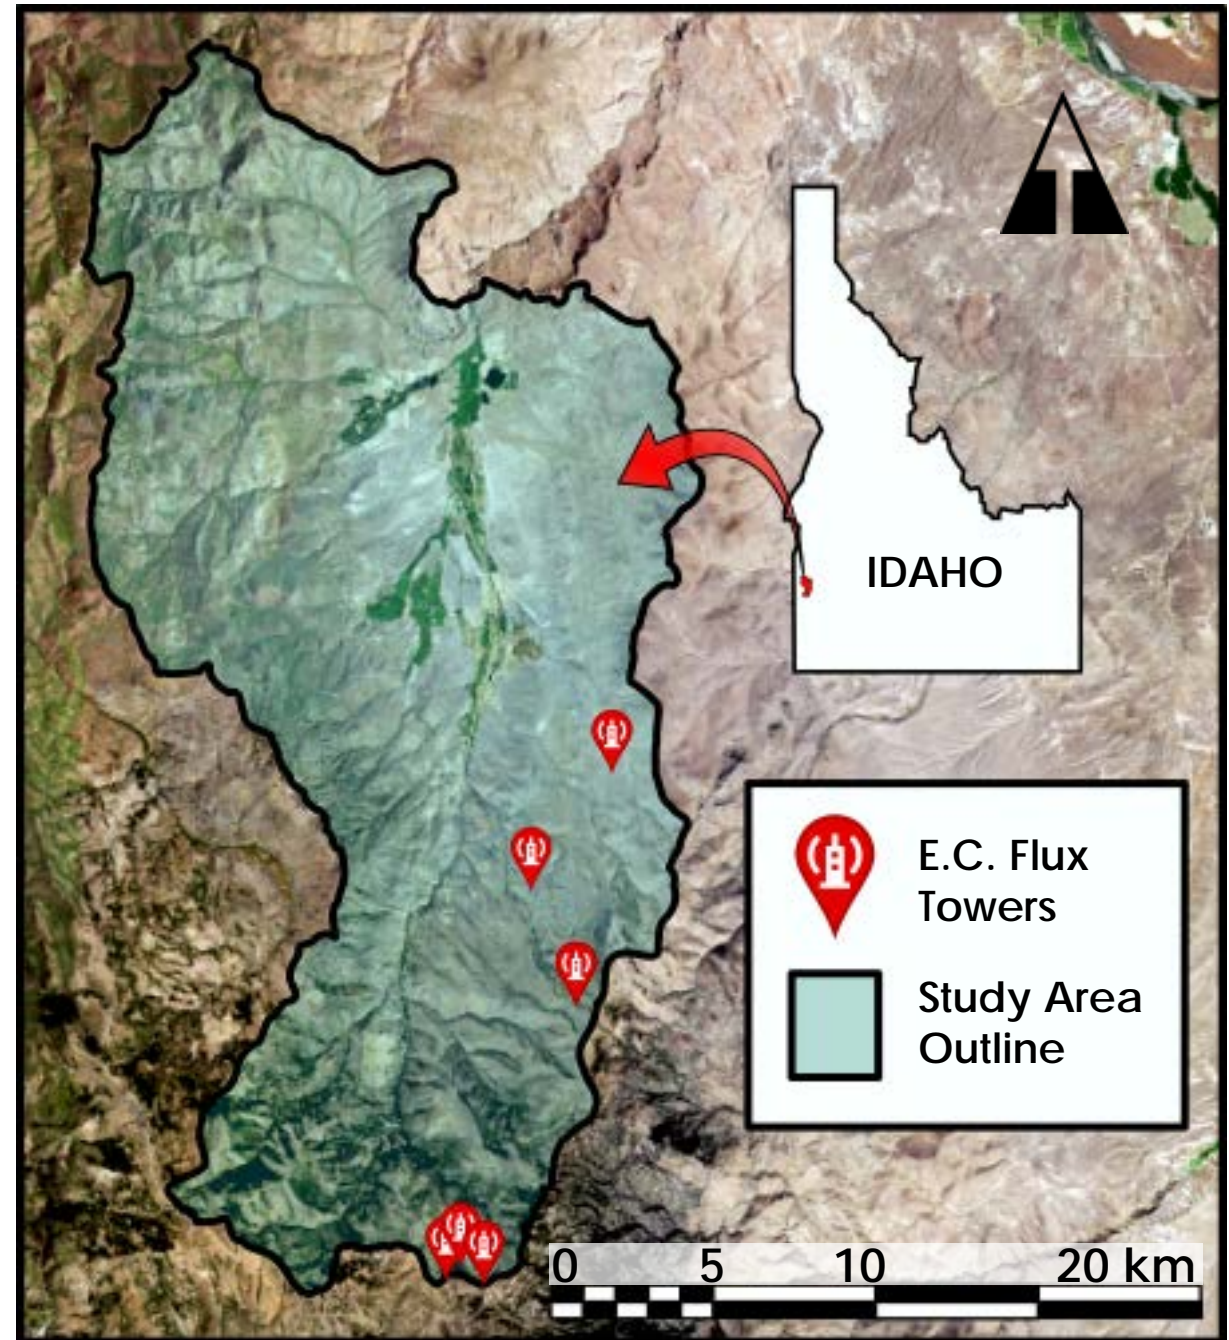

Landsat 8  
OLI & TIRS

Landsat 8  
OLI & TIRS

# Study Area

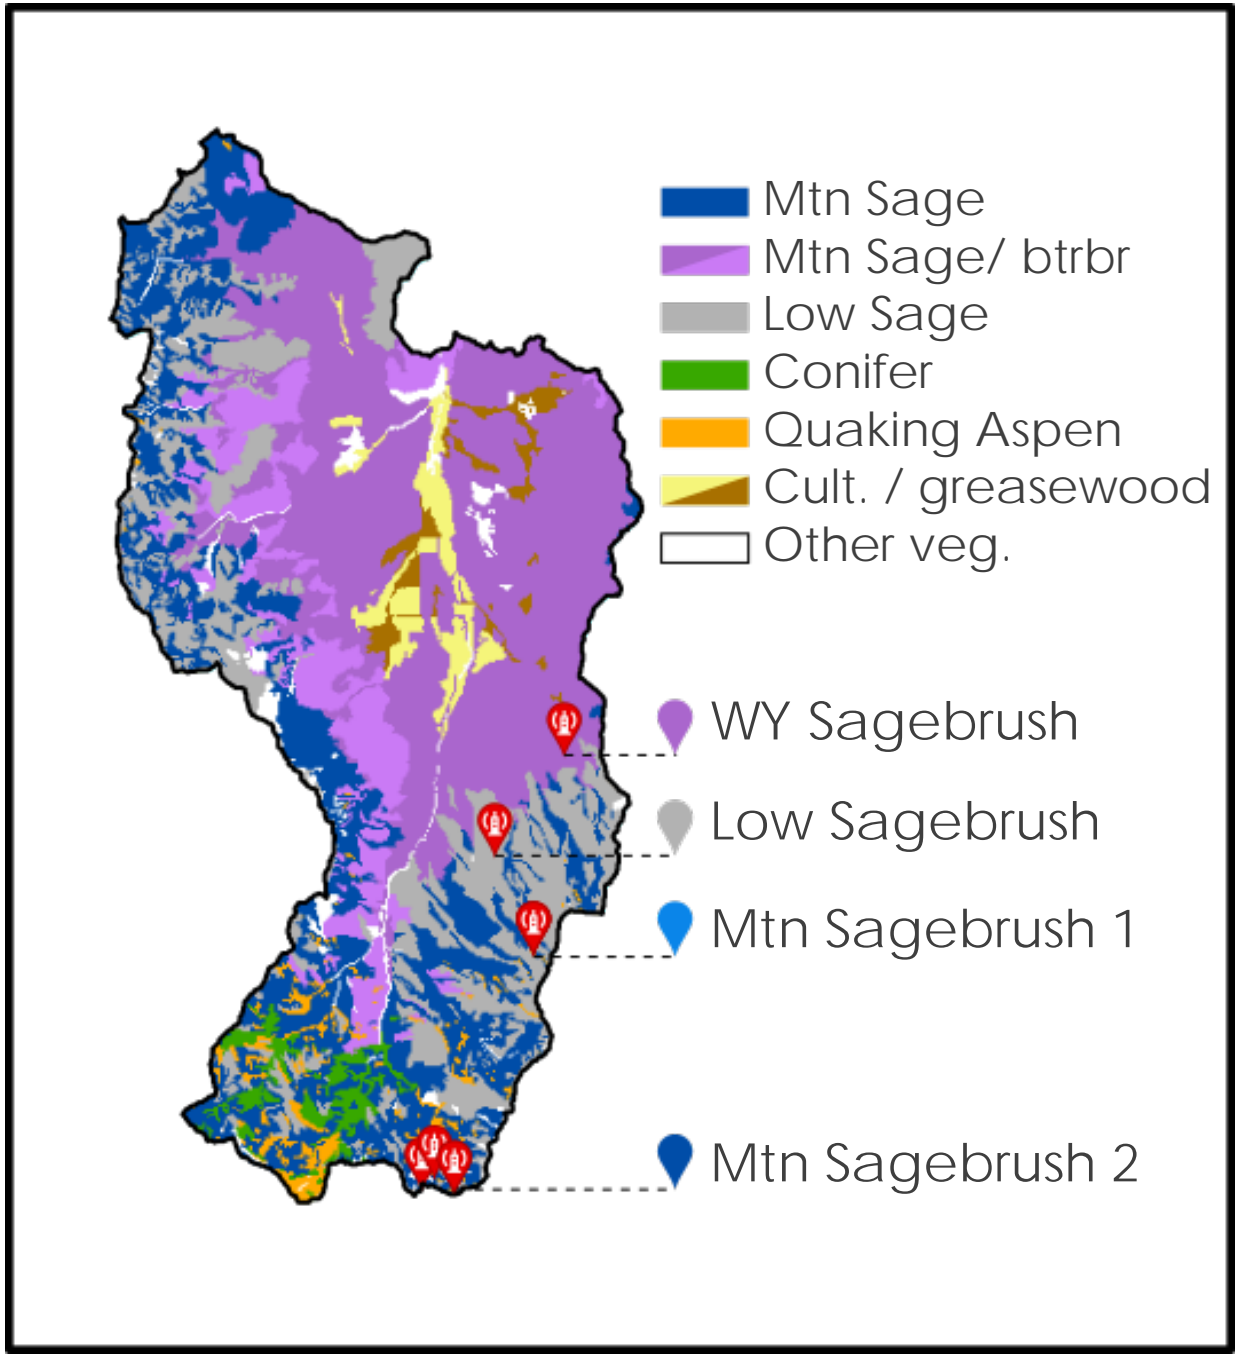

- ▶ Validation Sites: **RCEW**
  - ▶ Reynolds Creek Experimental Watershed
  - ▶ founded in 1959 as an outdoor laboratory for study of critical zone processes

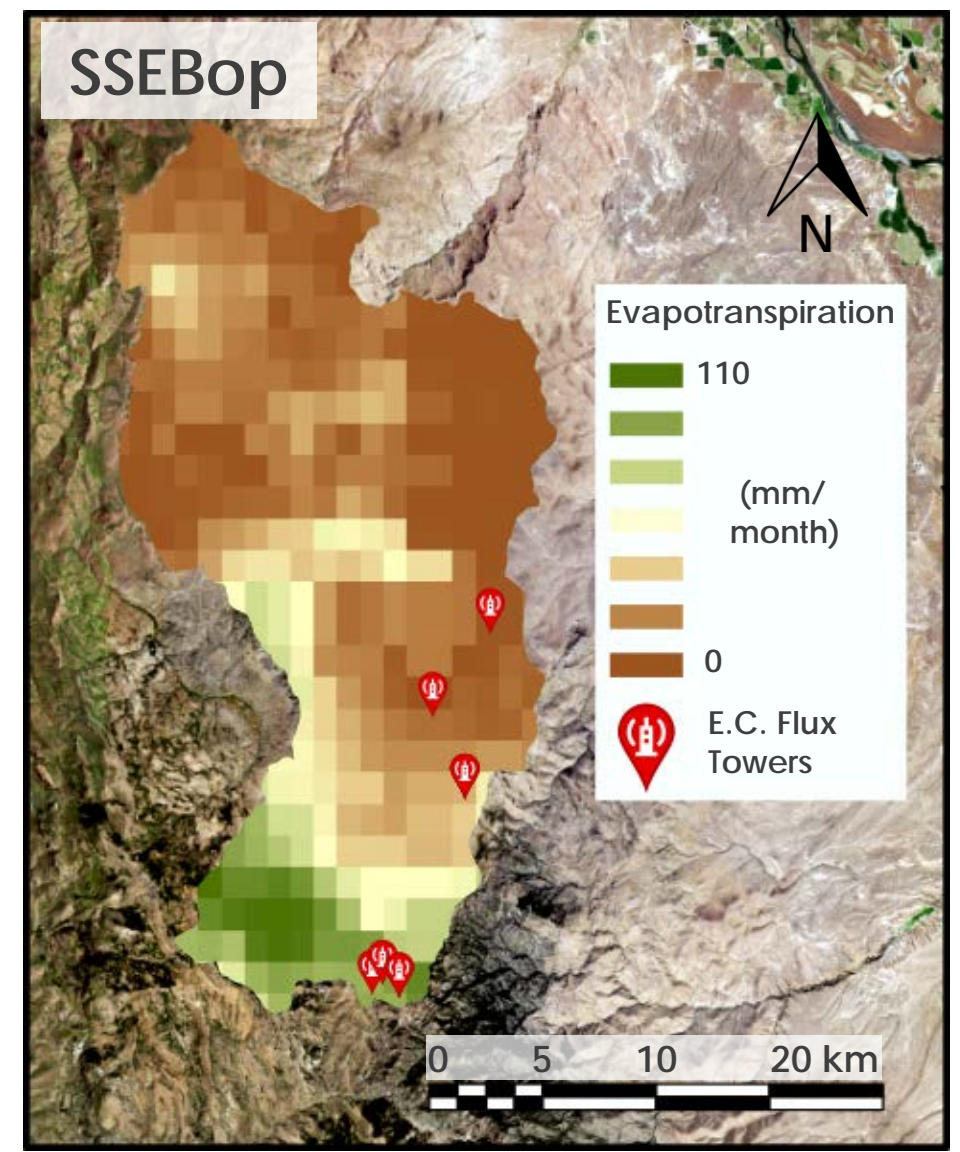

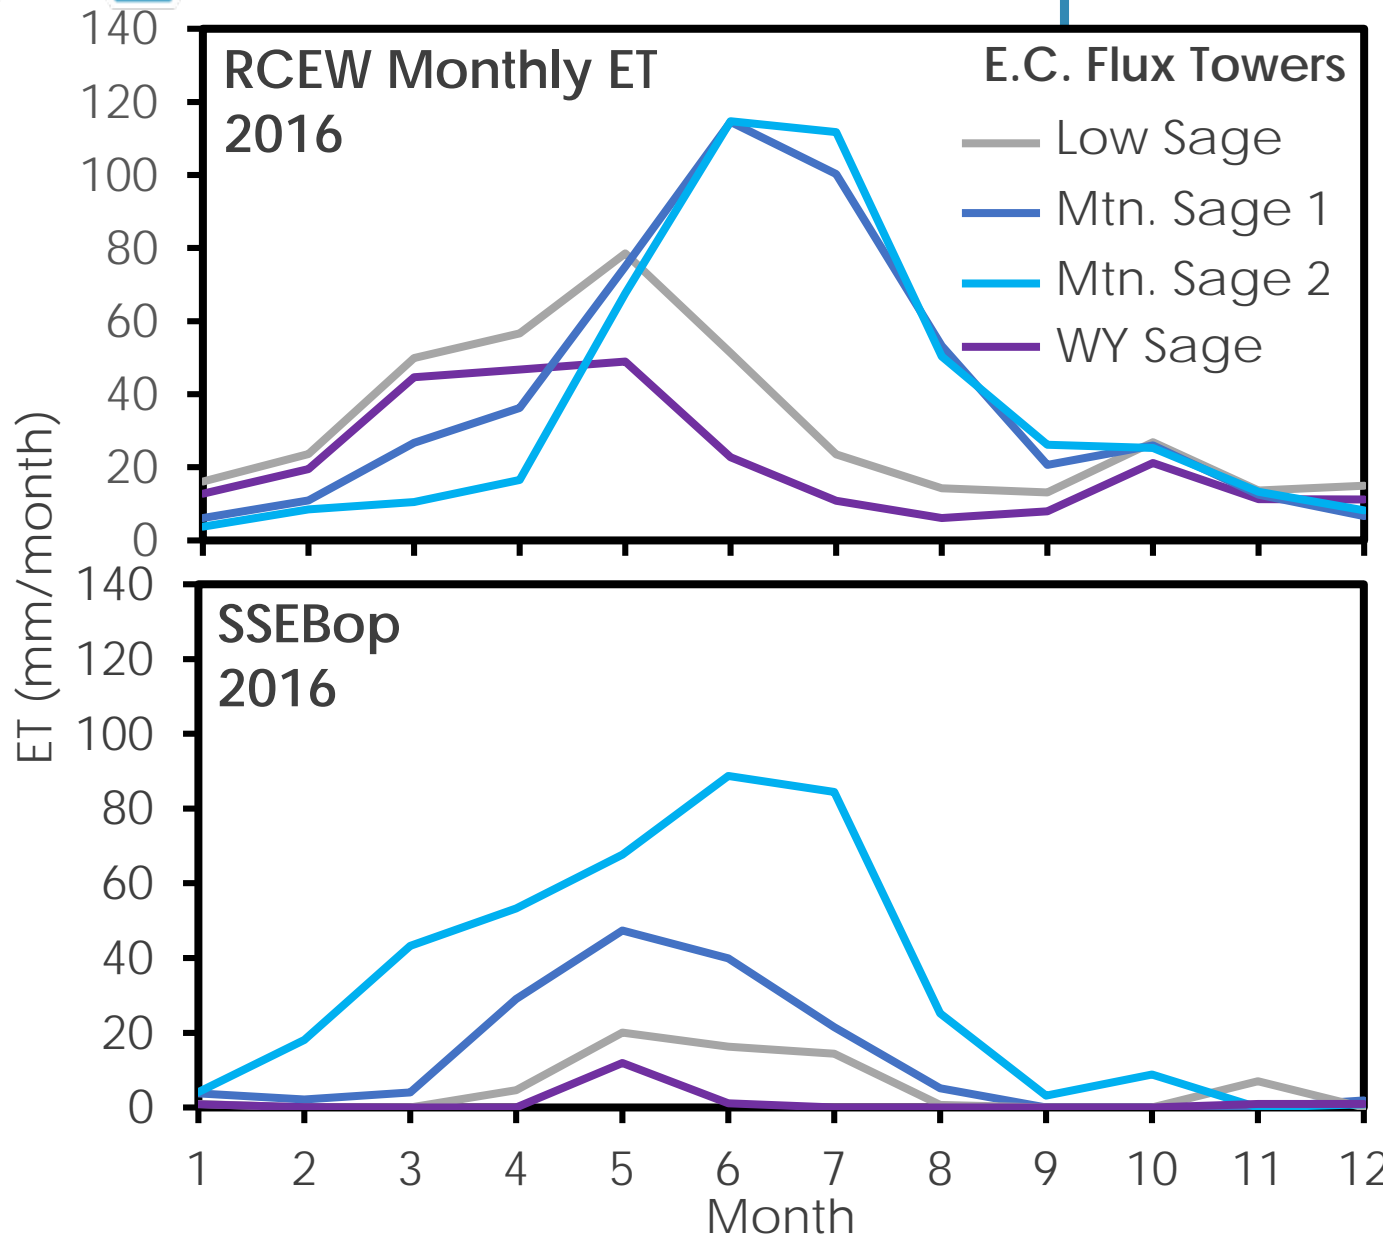

# RCEW Sites & Vegetation

- ▶ Representative sagebrush steppe, high desert
- ▶ 4 Eddy Covariance Flux Towers
- ▶ 3 vegetation types
- ▶ Elevation gradient
  - ▶ WY Sage → Mtn. Sage 2

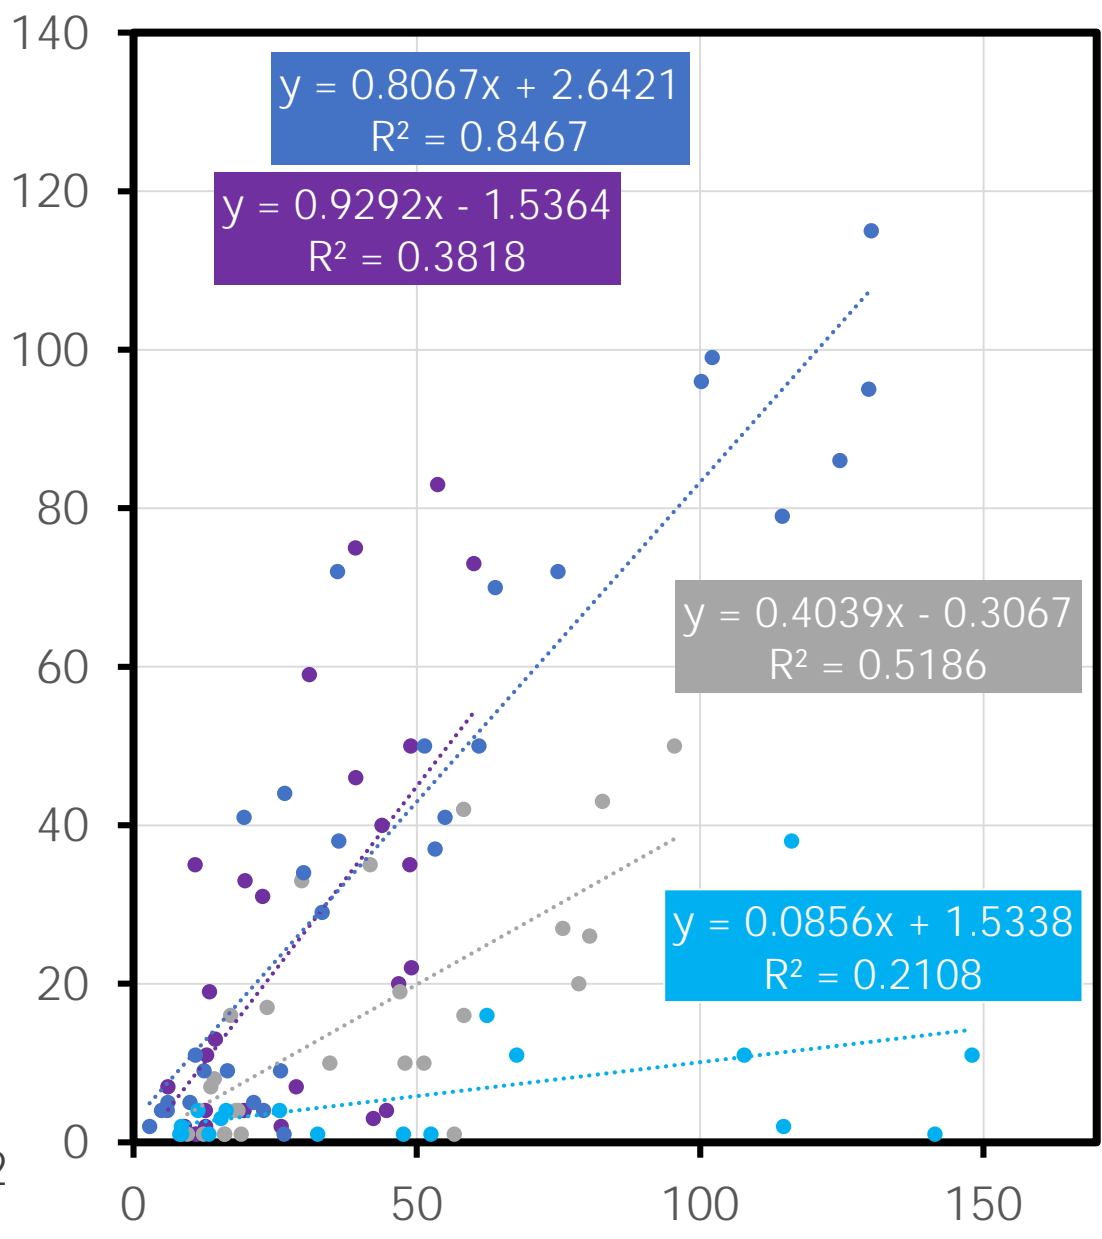

# Results: SSEBop

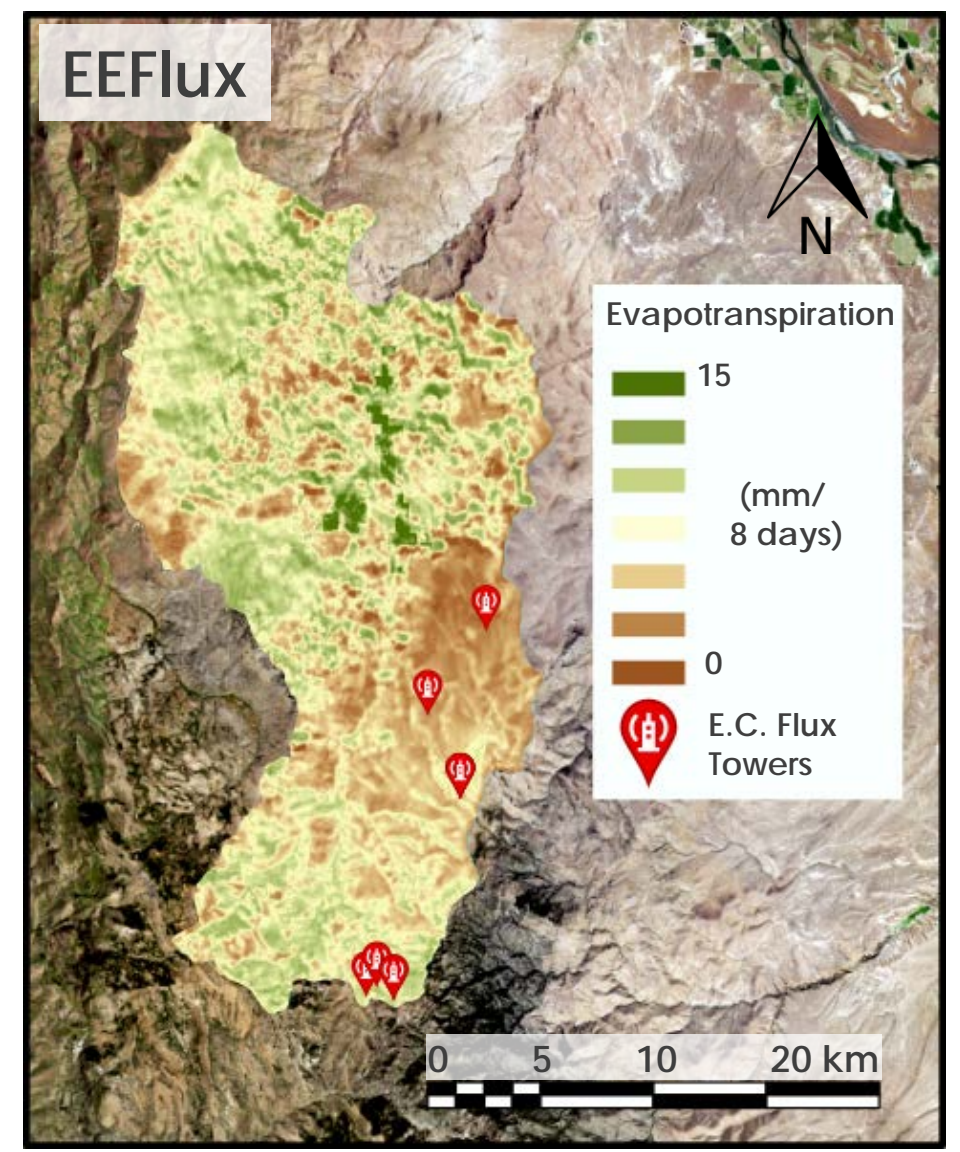

# Results: SSEBop

# Results: EEFlux

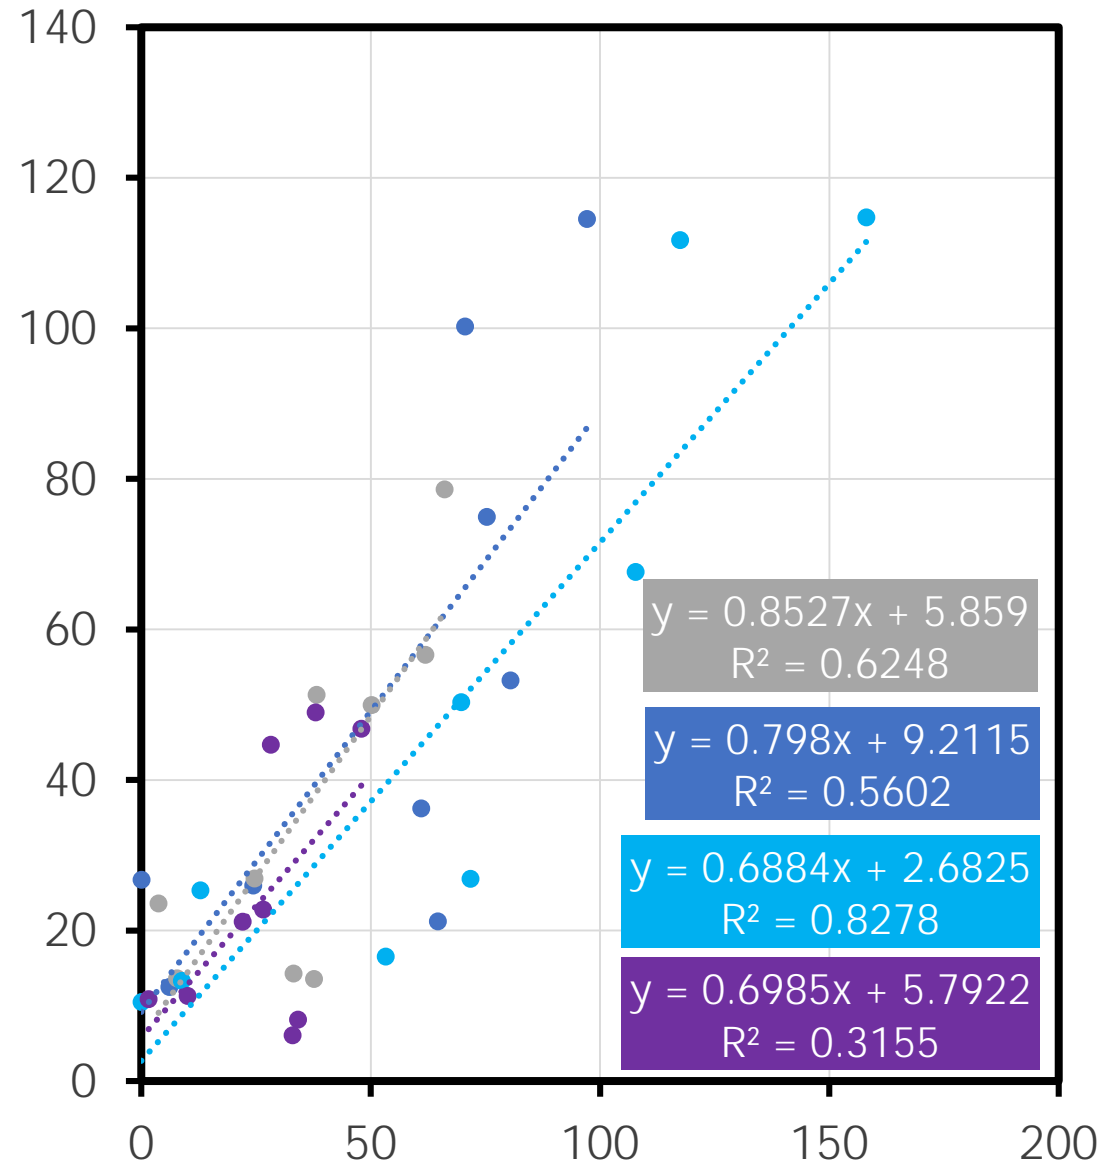

# Results: EEFlux

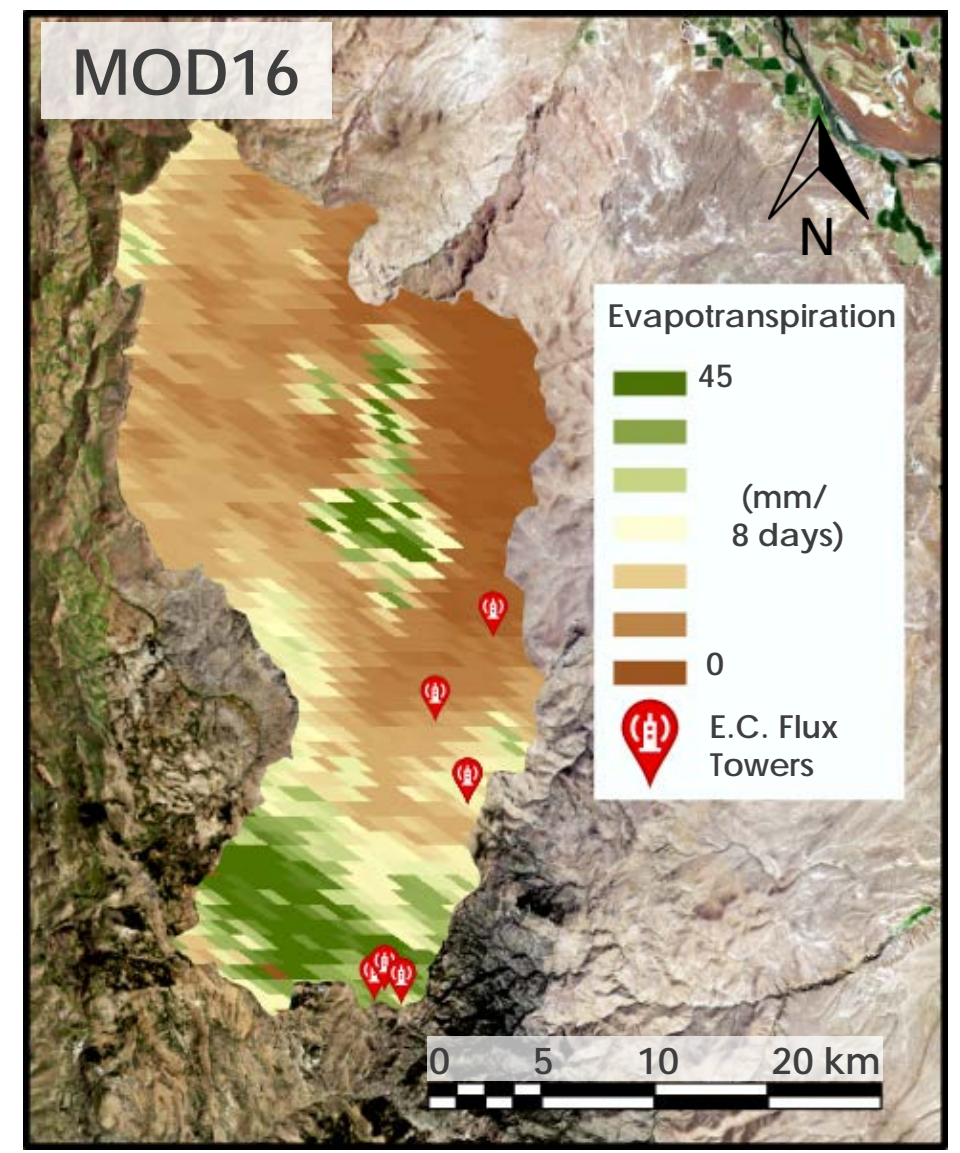

## EEFlux vs. RCEW 2016

# Results: MOD16

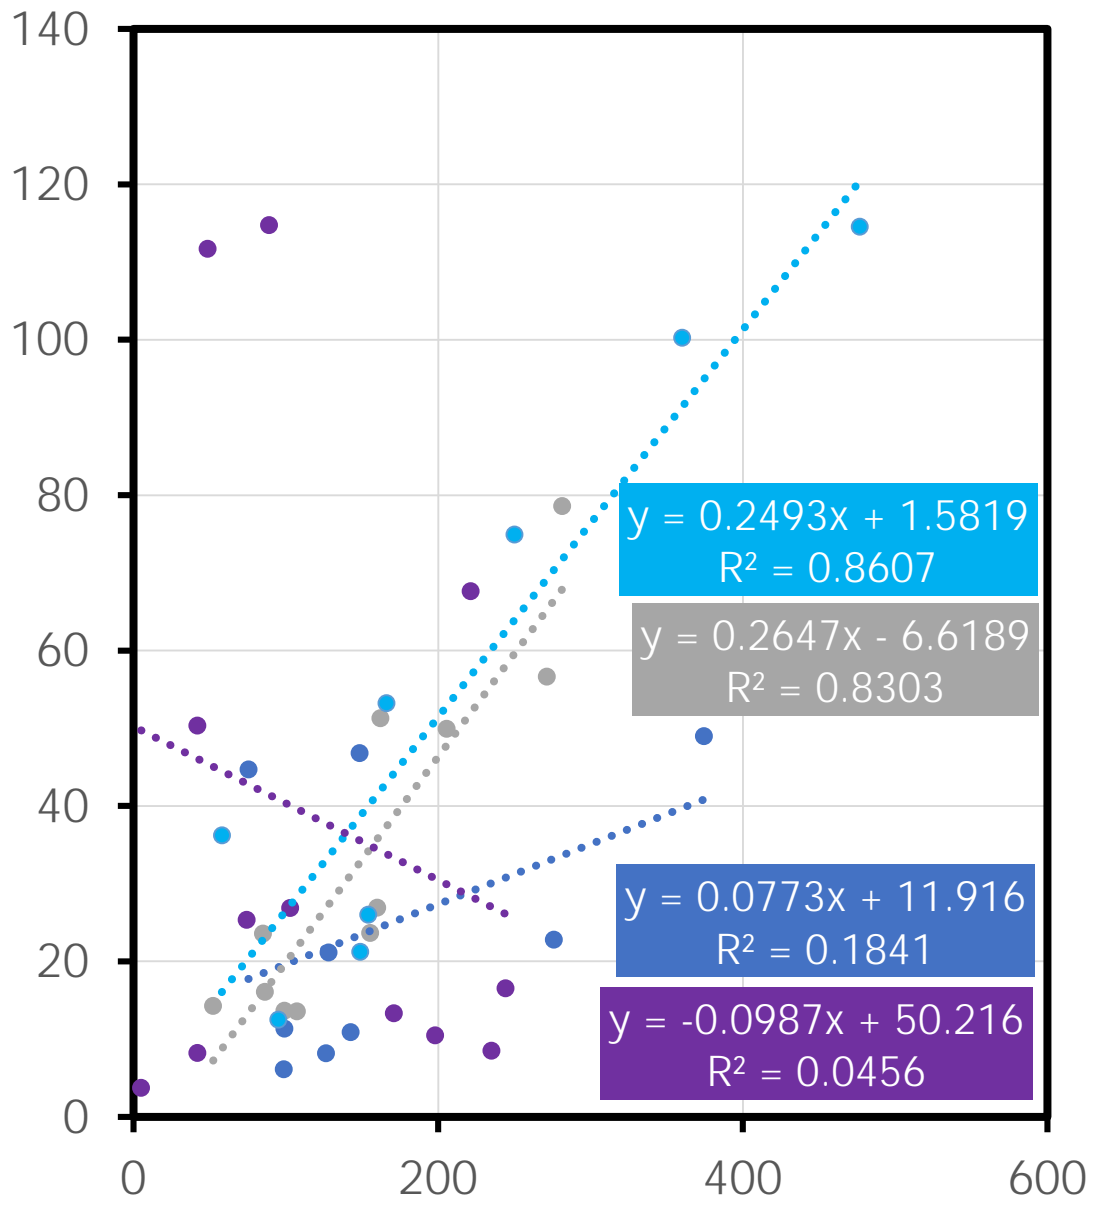

# Results: MOD16

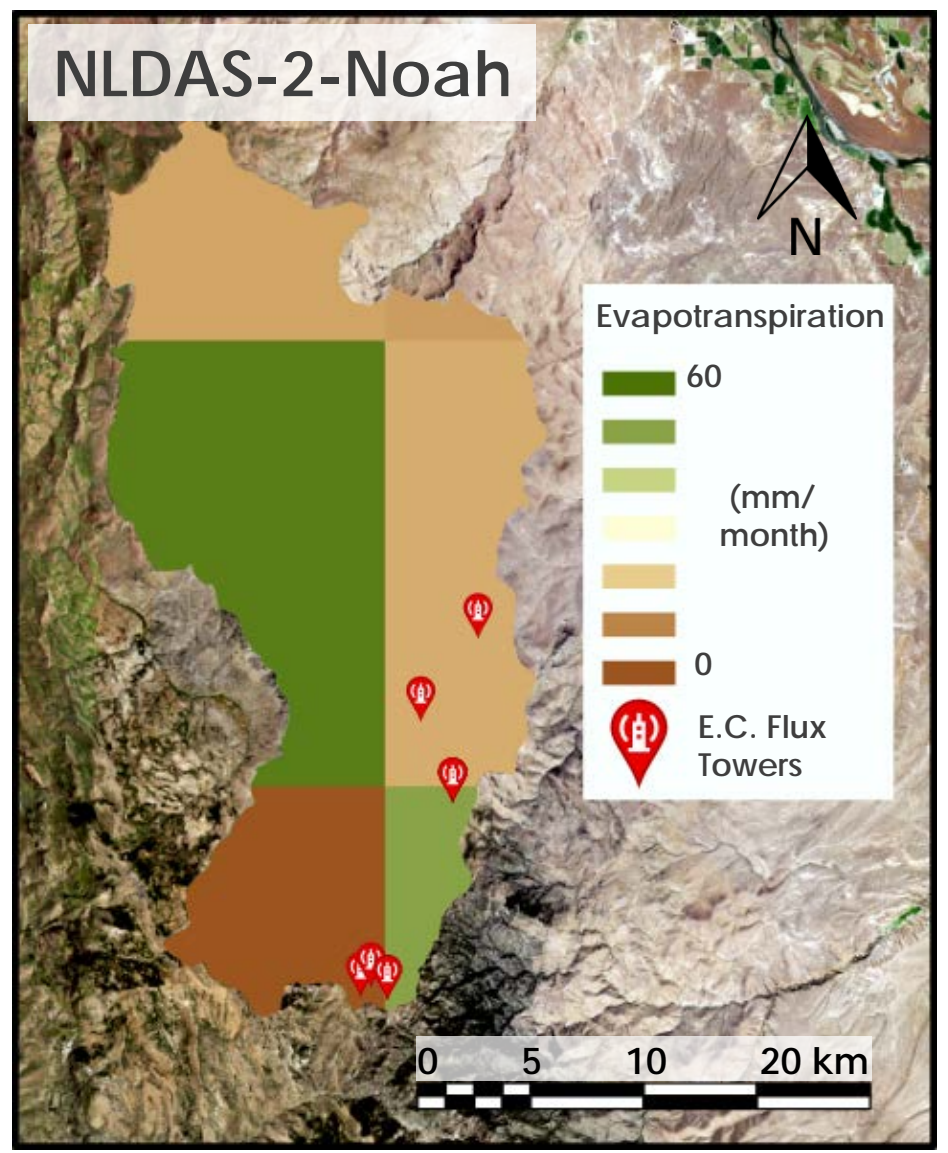

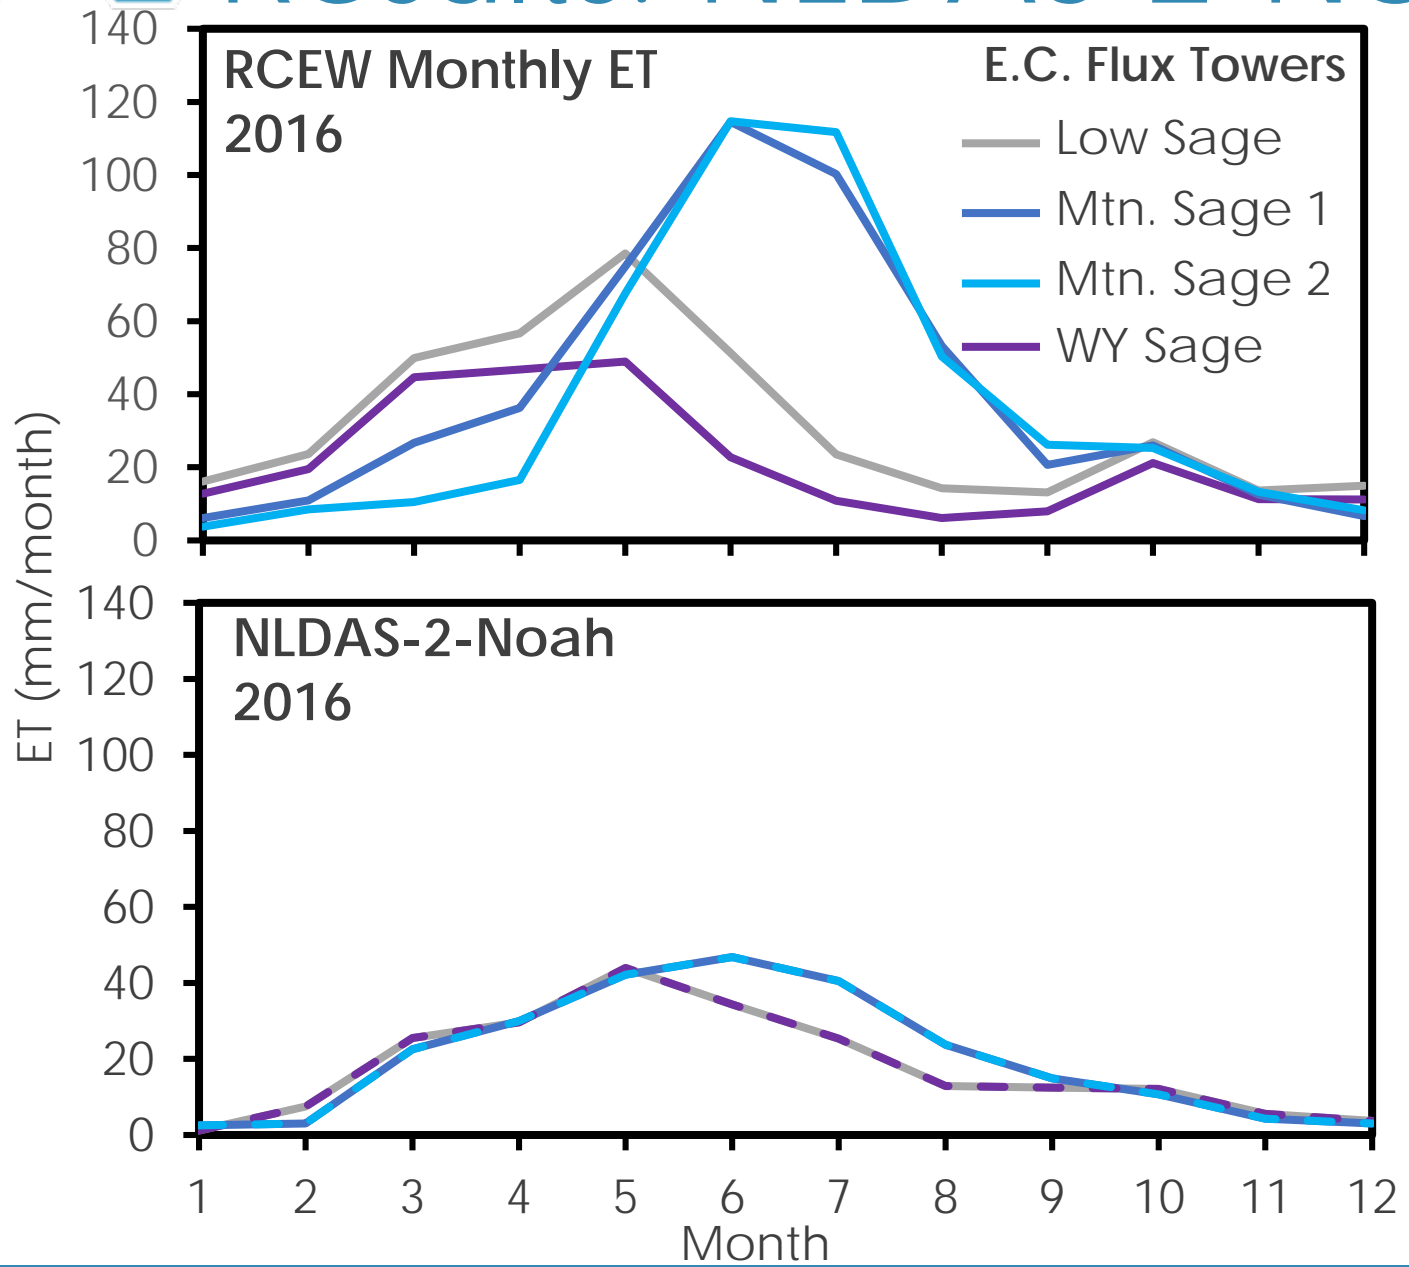

## MOD16 vs. RCEW, 2016

# Results: NLDAS-2-Noah

# Results: NLDAS-2-Noah

# Results: Model Comparison

MODEL	PROS	CONS
SSEBop	<ul style="list-style-type: none"><li>▶ Easy to access/download data</li></ul>	<ul style="list-style-type: none"><li>▶ Underestimates ET</li><li>▶ Highly variable correlations depending on vegetation/elevation</li></ul>
EEFlux (METRIC)		
MOD16		
NLDAS		

# Results: Model Comparison

MODEL	PROS	CONS
SSEBop	<ul style="list-style-type: none"><li>▶ Easy to access/download data</li></ul>	<ul style="list-style-type: none"><li>▶ Underestimates ET</li><li>▶ Highly variable correlations depending on vegetation/elevation</li></ul>

MOD16	<ul style="list-style-type: none"><li>▶ Fairly high spatial resolution</li></ul>	<ul style="list-style-type: none"><li>▶ Overestimates ET across the board</li></ul>
NLDAS		

# Results: Model Comparison

MODEL	PROS	CONS
SSEBop	<ul style="list-style-type: none"><li>▶ Easy to access/download data</li></ul>	<ul style="list-style-type: none"><li>▶ Underestimates ET</li><li>▶ Highly variable correlations depending on vegetation/elevation</li></ul>
EEFlux (METRIC)	<ul style="list-style-type: none"><li>▶ High spatial resolution</li></ul>	<ul style="list-style-type: none"><li>▶ Difficult to access &amp; download data</li><li>▶ Cloud cover limits usability</li><li>▶ Landsat 7 images may be unusable</li></ul>
MOD16	<ul style="list-style-type: none"><li>▶ Fairly high spatial resolution</li></ul>	<ul style="list-style-type: none"><li>▶ Overestimates ET across the board</li></ul>
NLDAS	<ul style="list-style-type: none"><li>▶ Best correlations</li><li>▶ High temporal resolution</li></ul>	<ul style="list-style-type: none"><li>▶ Low spatial resolution</li><li>▶ Correlation may depend on availability of meteorological data</li></ul>

# Results: Elevation

## ▶ EEFlux (METRIC)

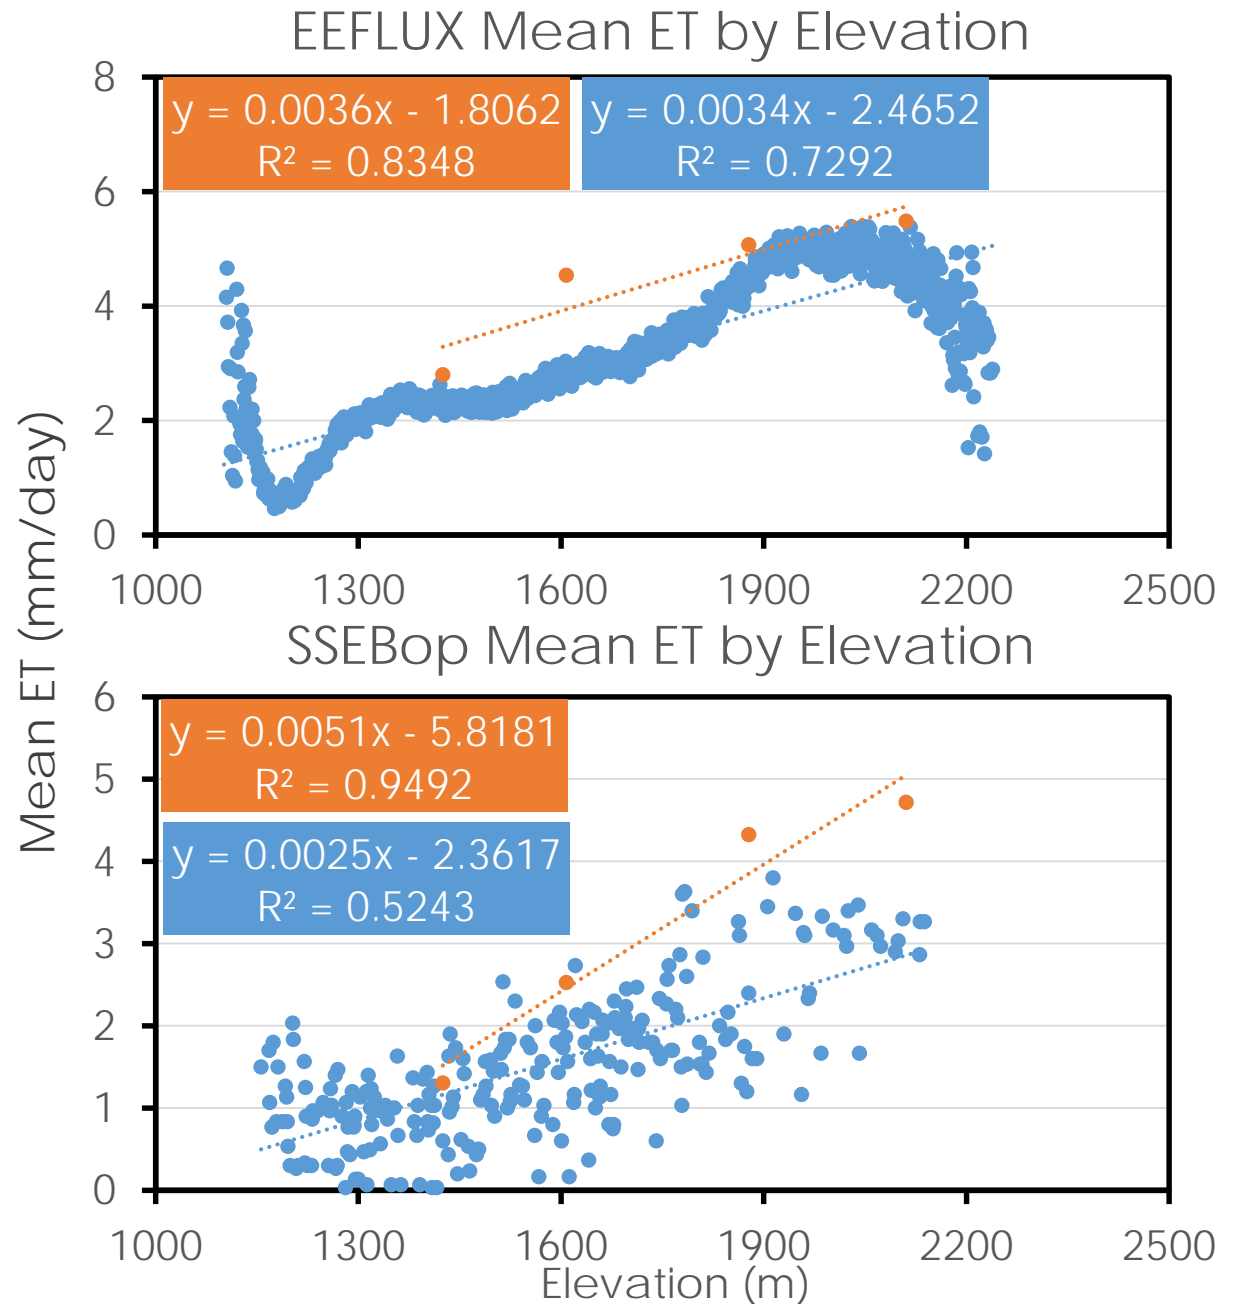

- ▶ EEFlux generally increases linearly with elevation from 1200-2000m
- ▶ Low and high elevations show models sensitivity to plant type
- ▶ Spatial resolution (30m) leads to greater sensitivity in elevation bins

## ▶ SSEBop

- ▶ Linear increase in ET with elevation
- ▶ Low sensitivity to different vegetation types at extremes of elevation, possibly due to spatial resolution (1000m)

## ▶ NLDAS-2 Noah

- ▶ Not shown, spatial resolution is ~12km, containing a large range of elevations per pixel, too coarse for analysis

# Results: Vegetation Type

## Distribution of Vegetation Type across RCEW

### ► Distribution of ET

- Sagebrush types account for 94% of vegetation
- Conifer and Aspen account for <4%

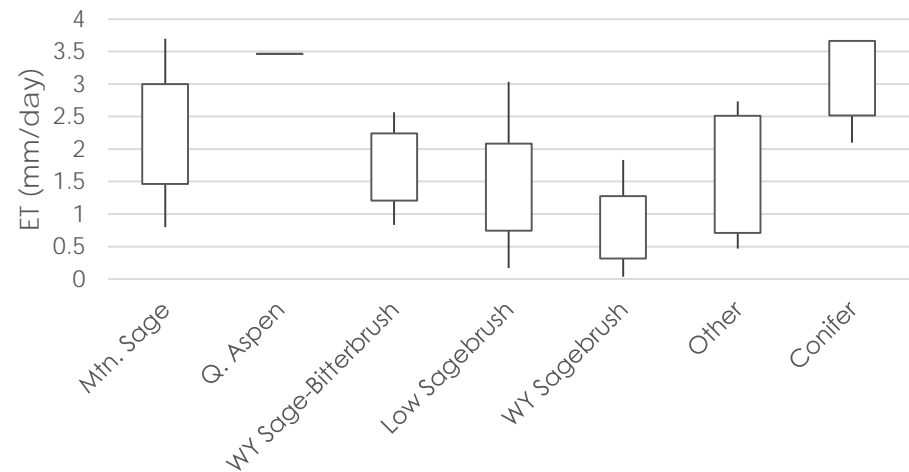

### ► ET by Vegetation Type

- EEFlux, SSEBop, and MOD16 all showed similar trends in ET by vegetation type

## EEFlux ET by Vegetation Type

## SSEBop ET by Vegetation Type

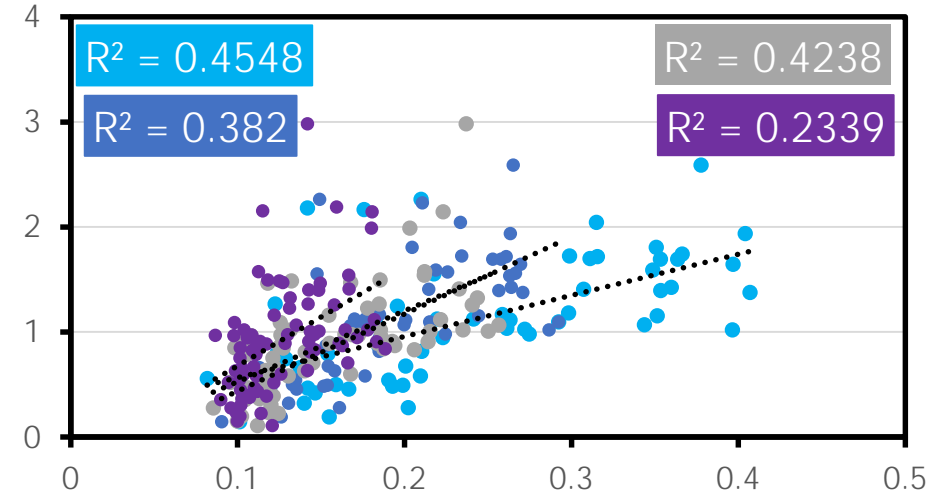

# Results: Vegetation Health

RCEW ET vs MSAVI-2

NLDAS ET vs MSAVI-2

## ▶ ET vs Vegetation Health

- ▶ ET increased linearly with vegetation health in all 4 models and *in situ* data
- ▶ Relationship is similar across sites, which vary in vegetation type, but are all dominated by varying species of sagebrush

SSEBop ET vs MSAVI-2

# Conclusions

- ▶ NLDAS-2 Noah was the best estimator of *in situ* ET measurements and had the best temporal resolution at 1 hr, but had the worst spatial resolution.
- ▶ Choose ET model based on the question you want to answer– Different spatial and temporal scales mean they would apply to different problems
- ▶ Sharpening high temporal resolution (NLDAS) data with high spatial resolution models (SSEBop, MOD16, or EEFlux) has the potential to be an ideal model

Image Credit: Reynolds Creek Experimental Watershed

## Future Work

- ▶ Compare this term's ET model results to the Patagonia steppe in Argentina and apply a new model developed there to Idaho
- ▶ Evaluate the ability of Ecosystem Spaceborne Thermal Radiometer Experiment on Space Station (ECOSTRESS) to measure ET in the semiarid sagebrush steppe
